6. Notes

[Advice for the optics]

6-1 Lens of this device shall be kept cleanly. There are cases that dust, water or oil and so on deteriorate the characteristics of this device. Please consider it at actual application.

6-2 In case that protection is set in front of the emitter and detector portion, the protection cover which has the most efficient transmittance at the emitting wavelength range of LED for this product ($\lambda=870\text{nm}\pm 70\text{nm}$), shall be recommended to use. The face and back of protection cover should be mirror polishing. Also, as there are cases that the characteristics may not be satisfied with according to the distance between the protection cover and this product or the thickness of the protection cover, please use this product after confirming the operation sufficiently in actual application.

[Advice for the characteristics]

6-3 In case that there is an object near to light exits of the sensor between the sensor and the detected object, please use this device after confirming sufficiently whether the characteristics of this sensor do not change by the object.

6-4 When the detector surface receive direct light from the sun, tungsten lamp and so on, there are cases that the distance can not be measured exactly. Please consider the design that the detector does not receive direct light from such light source.

6-5 Distance between sensor and mirror reflector can not measure exactly.

6-6 In case that reflective object has boundary line clearly, there is cases that distance can not measure exactly. At that time, if direction of boundary line and the line between emitter center and detector center are parallels, it is possible to decrease deviation of measuring distance.

6-7 In order to decrease measuring error due to moving direction of object, we recommend that the sensor be mounted like the drawing below.

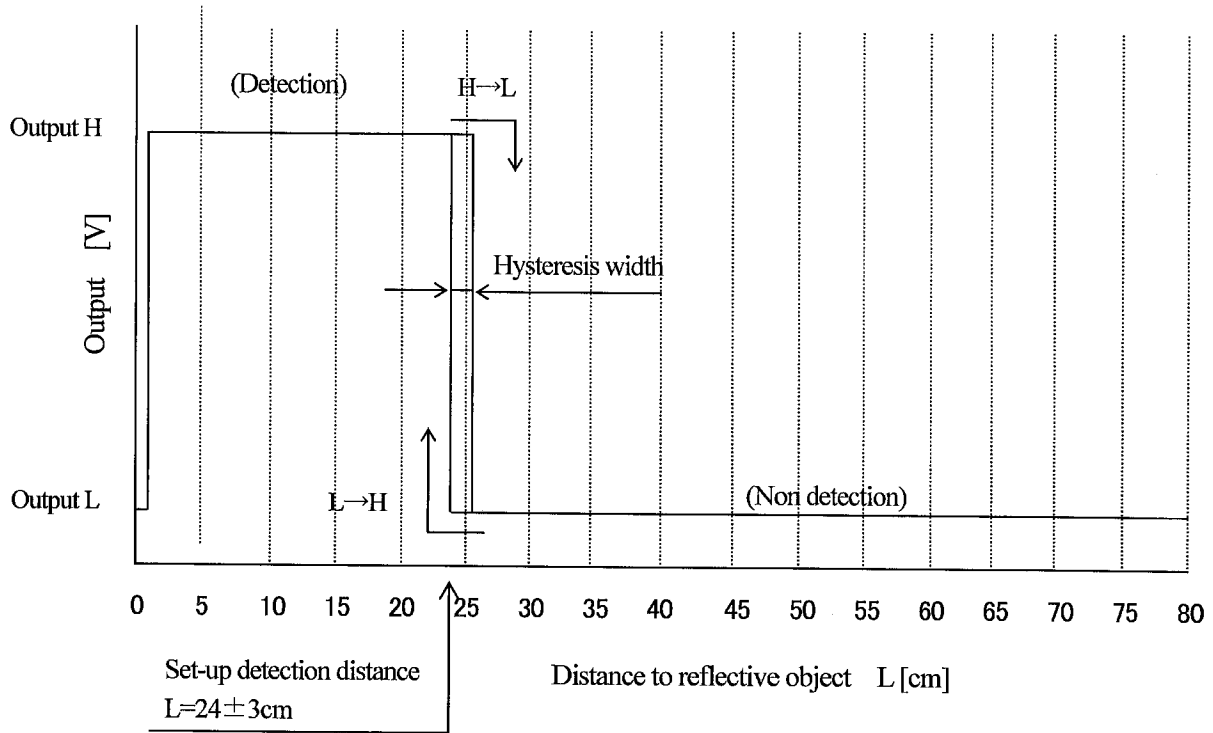

6-8 In order to stabilize power supply line, we recommend to connect a by-pass capacitor of $10\mu\text{F}$ or more between Vcc and GND near this product.

[Notes on handling]

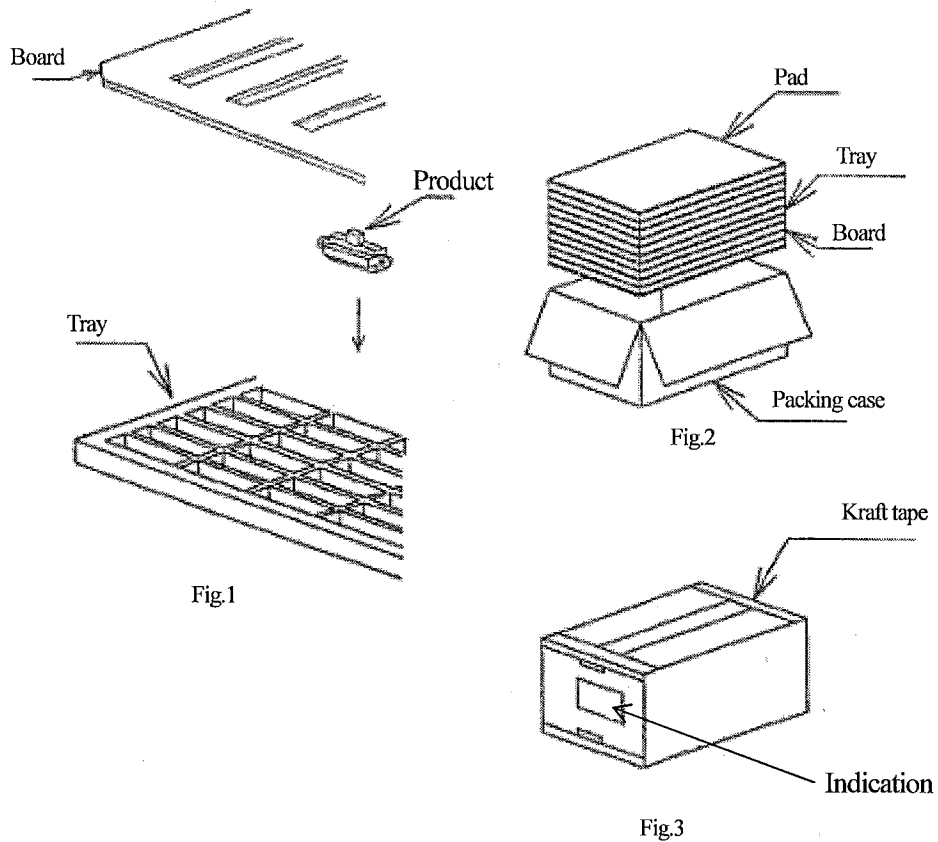

6-9 Please don't do washing. Washing may deteriorate the characteristics of optical system and so on. Please confirm resistance to chemicals under the actual usage since this product has not been designed against washing.

6-10 There are some possibilities that the sensor inside the case package with lens may be exposed to the excessive mechanical outer force. Please be careful not to cause any excessive pressure on the case package with lens and also on the sensor's PCB at the assembly and inserting of the set.
